

The planning team conducted a Social Infrastructure (SIF) analysis using a proprietary model that quantifies future needs of communities based on population projection inputs combined with a comprehensive list of social infrastructure standards and targets.

The following tables quantify increased demand in the four counties of Fort Stewart region for the following categories:

Child Care Facilities
Education Facilities
Health Care
Leisure & Recreation Facilities
Open Space
Emergency Services

Demand is determined based on the state Office of Planning and Budget population projections through 2030. The Table, Social Infrastructure Standards, shows the standards used to calculate demand for each category. The first four tables provide results for each county (including the cities). Tables 5 and 6 summarize results specifically for the region's two largest cities, Hinesville and Richmond Hill. The last table calculates demand associated only with the direct increase in military personnel and their families.

The phases are as follows:

Phase 1 - 2010
Phase 2 - 2015
Phase 3 - 2020
Phase 4 - 2030

The table results should be read as cumulative, meaning that demand build across the five-year time periods. The results in the 2030 column thus equal final and total demand for a particular service or facility. All positive numbers in the tables (shown as white cells) indicate that the county or city must increase the supply of facilities, personnel or space to maintain level of service standards. Negative numbers (shown as pink cells) indicate that the county or city has an excess of supply to meet projected demand.

The individual resource sections of the Technical Memo further explain the results of the SIF analysis by topical area.
